

AMENDMENTS

In the Specification:

Please amend the paragraph on page 3, beginning at line 15, as follows:

As shown in FIG. 3, the electronic component feeding device 3A of the feeding system 3 has a base 11 extending in a lateral direction, four slide bases (unit bases) 12 slidably mounted on the base 11, many component feeding units 13 attachably mounted on each of the slide bases 12, and a linear motor 14 provided between the base 11 and the slide bases 12. Two pairs of the slide bases 12 are each disposed on left and right sides of the base 11. Two groups of the component feeding units 13 are alternately ~~moves~~ moved to the main body 2 by each of the two pairs of the slide bases 12. That is, while one pair of slide bases 12 on one side, which has the component feeding units 13 thereon, slides to a front of the main body 2 to feed the electronic components A, another pair of slide bases 12 at an original position on another side performs a replacement operation of the component feeding units 13 for a next feeding operation.
